

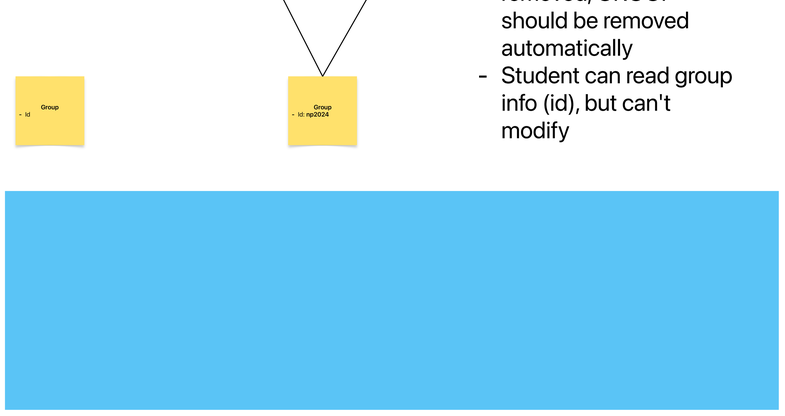
- Student's **can't** change the GROUP
- Once all students are removed, GROUP should be removed automatically
- Student can read group info (id), but can't modify



Can increment using & reference

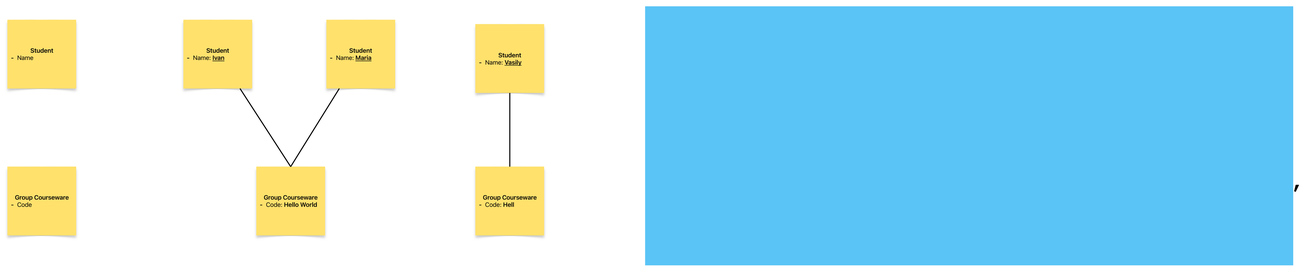
```rust
fn group_test(group: &Group){
    println!("{}", group.students_count()); // 0
    group.add_student();
    println!("{}", group.students_count()); // 1
}
```

```rust
struct Group {
    id: String,
    students_count: ???,
}

impl Group {
    fn new(id: String) -> Self {
        Self {
            id,
            students_count: ???,
        }
    }

    fn add_student(&self) {
        ??? // increment
    }

    fn students_count(&self) -> i32 {
        ???
    }
}
```



```rust
impl Student {
    fn assign_courseware(&mut self, courseware: ???) {
        self.courseware = ???;
    }

    fn update_courseware(&mut self, code: String) {
        ???
        let mut courseware: &mut Courseware = ???self.courseware???;
        courseware.code = format!("{}\n<{}> {}", courseware.code, self.name, code);
    }
}
```
